CHAPTER 1

Admin Panel Overview & Navigation

How to access and navigate the admin dashboard

Logging In to Admin

Access the admin panel at `/admin`

1

Open the Admin URL

In your browser, go to your store URL followed by `/admin` — for example: `http://last-ecom.test/admin`

2

Enter Your Credentials

Enter your admin email and password. Only accounts with the `admin` role can access this area.

Never share your admin credentials. If you need to add a team member, create a separate admin account.

3

You're on the Dashboard

After login you land on the Dashboard showing today's sales, recent orders, and stock alerts.

Admin Navigation Structure

Left sidebar gives you access to every admin feature

Dhakshan Admin

Settings

What each section does

SECTION	PURPOSE
Dashboard	Real-time sales KPIs, charts, recent orders
Products	Add, edit, delete products and variants
Categories	Manage 3-level category tree
Inventory	Update stock levels for variants
Orders	Process orders through shipping pipeline
Customers	View profiles, spending, order history
Returns	Approve or reject return requests
Coupons	Create discount codes and offers
Banners	Hero slider, popups, promotional images
Reviews	Approve or reject customer reviews
Reports	Sales, GST, profit, inventory reports
Shipping	Define delivery zones and rates
Settings	Store info, payment, email config

CHAPTER 2

Managing Categories

Organize your products with a 3-level category hierarchy

📌 Why categories matter

Categories control how products appear in your store navigation. Customers browse by category — so a clear, well-organized hierarchy makes products easier to find. Your site supports

3 levels

: Parent → Child → Sub-child.

Category Hierarchy Explained

Level 1 — Parent

Main top-level category.
Appears in the main navigation menu.

Examples: Women, Men, Kids

Level 2 — Child

Sub-category under a parent.
Appears as dropdown items in nav.

Examples: Sarees, Kurtas, Lehengas (under Women)

Level 3 — Sub-child

Deepest level. Indented inside dropdown.

Examples: Silk Sarees, Cotton Sarees (under Sarees)

Recommended starting structure for a fashion store:

Women → Sarees → Silk Sarees / Cotton Sarees / Printed Sarees

Women → Kurtas → Anarkali / Straight Cut / Palazzo Set

Women → Lehengas → Bridal / Party Wear

Men → Ethnic → Kurta Pyjama / Sherwani

Kids → Girls / Boys

How to Add a New Category

Go to Admin → Categories → click "Add Category"

1

Go to Categories

In the left sidebar, click **Categories** under the CATALOG section.

2

Click "Add Category"

The button is in the top-right corner of the Categories page. A form will appear at the top of the page.

3

Fill in Category Details

Complete the form fields below:

FIELD	WHAT TO ENTER	REQUIRED?
Name	Category display name (e.g., "Silk Sarees") <i>The URL slug is auto-generated from the name</i>	Required
Parent Category	Select a parent if this is a child/sub-child category. Leave blank for a top-level (Level 1) category.	Optional
Description	Short description shown on the category page	Optional
Image	Square image for category card (JPG/PNG, min 400×400px recommended)	Optional
Banner Image	Wide banner shown at the top of the category page (1200×300px recommended)	Optional
Sort Order	Number to control display order. Lower number = shown first. Use 10, 20, 30... to leave room for insertions.	Optional
Active	Toggle ON to make category visible to customers	—
Show in Menu	Toggle ON to display in the top navigation menu	—

The slug (URL-friendly name) is auto-generated. For "Silk Sarees" it becomes `/categories/silk-sarees`

4

Save the Category

Click **Save Category**. The new category appears in the list immediately.

5

Add Child Categories (Next Step)

Repeat the process, but this time select the parent category you just created from the "Parent Category" dropdown. This creates a child category under it.

Best practice: Create all Level 1 (parent) categories first, then go back and add Level 2 children, then Level 3 sub-children.

Step-by-Step: Build a Full Category Tree

Example: Adding "Women → Sarees → Silk Sarees"

1

Create the Parent: "Women"

Name: **Women** | Parent: *None* | Show in Menu: **ON** | Sort Order: **10** → Save

2

Create the Child: "Sarees"

Name: **Sarees** | Parent: **Women** | Show in Menu: **ON** | Sort Order: **10** → Save

3

Create the Sub-Child: "Silk Sarees"

Name: **Silk Sarees** | Parent: **Sarees** | Show in Menu: **ON** | Sort Order: **10** → Save

4

Verify in Navigation

Open your storefront. Hover over **Women** in the top nav → you'll see **Sarees** as a dropdown → and **└ Silk Sarees** indented below it.

If the category doesn't appear, check that both "Active" and "Show in Menu" are toggled ON.

CHAPTER 3

Managing Products

Add, edit, and publish products with variants, images, and pricing

Adding a New Product — Step by Step

Admin → Products → click "+ Add Product"

Step 1 — Basic Information

FIELD	WHAT TO ENTER	
Product Name	Full product name. E.g., "Kanjivaram Silk Saree - Royal Blue" <i>Slug auto-generated: /products/kanjivaram-silk-saree-royal-blue</i>	Required
Category	Select from the category tree (3 levels). Choose the most specific sub-category.	Required
Description	Detailed product description. Include material, occasion, features. HTML formatting supported.	Required
Brand	Brand or manufacturer name (optional)	Optional
SKU	Your internal product code. E.g., "KSS-RB-001". Must be unique.	Optional
Fabric	Material type — "100% Pure Silk", "Cotton Blend", etc.	Optional
Care Instructions	Washing/care details — "Dry clean only", "Hand wash in cold water"	Optional
Tags	Comma-separated keywords for search: "saree, silk, bridal, traditional"	Optional

Step 2 — Pricing

FIELD	WHAT TO ENTER	
MRP / Base Price	Maximum Retail Price (before discount). This is the crossed-out price shown to customers.	Required
Sale Price	Actual selling price. Must be ≤ MRP. The discount % is auto-calculated from MRP vs Sale Price.	Required
Cost Price	Your purchase/manufacturing cost. Used only for profit reports — not shown to customers.	Optional

 Pricing Example

MRP = ₹4,999 | Sale Price = ₹2,999 → Customers see

₹2,999

with

₹4,999

crossed out and a **40% OFF** badge.

Step 3 — Product Flags

 Active

Turn ON to publish. Turn OFF to hide from customers without deleting.

 Featured

Appears in "Featured Collections" section on the homepage.

 New Arrival

Appears in "New Arrivals" section on the homepage.

Step 4 — SEO Settings

FIELD	WHAT TO ENTER
Meta Title	Page title for Google (60 chars max). E.g., "Buy Kanjivaram Silk Saree Online Dhakshan Fashion"
Meta Description	Search result snippet (155 chars max). Describe the product with keywords.

Adding Product Variants (Sizes & Colors)

Use variants when a product comes in multiple sizes, colors, or combinations

1

Enable Variants

On the Add/Edit Product page, toggle ON **"Has Variants"**. A variant table will appear below.

2

Click "Add Variant"

A new row appears in the variant table. Fill in each column:

COLUMN	EXAMPLE	NOTES
Size	S, M, L, XL, Free Size	What size/dimension
Color	Royal Blue	Color name (text)
Color Hex	#1e3a8a	Color swatch (6-digit hex code)
SKU	KSS-RB-M	Unique code for this variant
Price	2999	Overrides base price for this variant
Stock	25	Units available for this variant

3

Add More Variants

Click "Add Variant" again for each size/color combination. For a saree in 3 colors: add 3 rows, one per color.

If all variants have the same price, only fill the base Sale Price and leave variant Price empty — it will inherit the base price.

4

Save the Product

Variants are saved along with the product. Customers will see size/color selectors on the product page.

Uploading Product Images

High-quality images are key to conversions

1

Save the Product First

Images are uploaded after the product is created. Save basic info first, then scroll down to the Images section.

2

Upload Images

Click the upload area or drag-and-drop JPG/PNG files. You can upload multiple images at once.

Recommended size: **800×1000px** (portrait, 4:5 ratio works best). Maximum file size: 2MB per image.

3

Set the Primary Image

The first image becomes the primary product thumbnail shown in listings. Drag to reorder images if needed.

Add 4–6 images: front view, back view, close-up of fabric/design, and a styled lifestyle shot.

Bulk Import Products via CSV

Add hundreds of products at once using a spreadsheet

1

Download the Template

Go to **Admin** → **Products** and click "**Import**", then download the CSV template. This gives you the correct column format.

2

Fill the Spreadsheet

Open in Excel or Google Sheets. Fill one product per row. Required columns: name, category_slug, base_price, sale_price, status.

The **category_slug** column must match an existing category slug exactly (e.g., "silk-sarees").
Create categories first before importing.

3

Upload and Import

Save as CSV, then upload the file via the Import button. Products are created immediately.

CHAPTER 4

Inventory Management

Monitor and update stock levels for all product variants

Updating Stock Levels

Admin → Inventory

1

Go to Inventory

Click **Inventory** in the left sidebar. You'll see all product variants in a table.

2

Search for a Product

Use the search box to find a product by name. All its variants will be listed.

3

Edit Stock

Click the **Edit** icon next to a variant. Type the new stock number and click **Save**.

4

Watch for Alerts

The dashboard shows a **Low Stock Items** count when any variant drops below 5 units. Restock before it hits zero.

When stock = 0, customers see "Out of Stock" and cannot add to cart. Keep buffer stock of at least 5 units per variant.

● Low Stock Warning

Highlighted in **yellow** when stock < 5 units.
Reorder immediately.

● Out of Stock

Highlighted in **red** with "Out" badge. Product hidden from "Add to Cart" on storefront.

CHAPTER 5

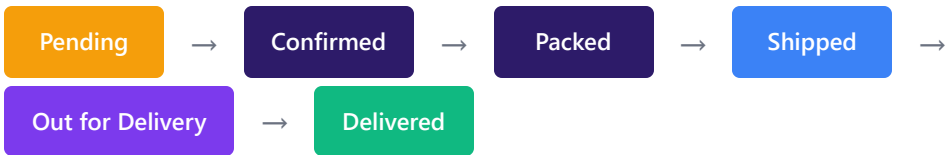

Processing Orders

From new order to delivered — the complete order management workflow

Order Status Pipeline

Every order moves through these stages in sequence

Cancelled — Can happen at any stage before shipping

STATUS	MEANING	ADMIN ACTION NEEDED
Pending	Customer placed order, awaiting confirmation	Review and Accept
Confirmed	Order accepted, preparing to pack	Pack the items
Packed	Items packed, ready to hand to courier	Add tracking & dispatch
Shipped	Courier has picked up the parcel	Monitor delivery
Out for Delivery	Last-mile delivery in progress	No action needed
Delivered	Customer received the order	None (completed)
Cancelled	Order cancelled by customer or admin	Process refund if paid

Step-by-Step Order Processing

Admin → Orders

1

Check for New Orders

Go to **Admin** → **Orders**. You'll see a pipeline view. The **"New Orders"** column shows all pending orders waiting for your action.

Check orders at least twice a day — morning and afternoon. Enable browser notifications if available.

2

Review the Order

Click **View** on any pending order to see: customer details, items ordered, delivery address, payment method (COD/Online), and payment status.

If payment method is "Online" and payment status is "Pending", the customer hasn't paid yet. Wait for payment before accepting.

3

Accept the Order

Click **"Accept"** on the order card. Status changes from **Pending** → **Confirmed**. An SMS/WhatsApp notification link is shown for you to notify the customer.

4

Pack the Order

Physically pack the items. Then click **"Mark as Packed"** in the order. Status becomes **Packed**.

At this stage you can download a **Manifest CSV** listing all "Ready to Ship" orders — useful for handing to courier partner.

5

Add Tracking & Dispatch

Once the courier picks up the parcel, click **"Dispatch"**. A form appears to enter:

FIELD	EXAMPLE
Courier Name	Delhivery / BlueDart / DTDC / Ekart
Tracking Number	DEL1234567890
Tracking URL	https://www.delhivery.com/track/...

Get the tracking number from your courier partner's app/dashboard. Customers can track their order using this number.

6

Order Delivered

When the courier delivers the parcel, manually update the status to **Delivered** from the order detail page. For COD orders, collect payment is confirmed at this step.

WhatsApp Quick Notification

Each order card has a WhatsApp link pre-filled with the customer's name and order number. Click it to open WhatsApp Web and send a quick confirmation message.

CHAPTER 6

Managing Customers

View customer profiles, purchase history, and account management

Customer Management

Admin → Customers

1

Search for a Customer

Use the search bar to find by name, email, or phone number. Filter by **All / Active / Blocked** tabs.

2

View Customer Details

Click a customer row to see: full profile, all past orders, saved addresses, and spending summary (total orders, total spent, average order value).

3

Block / Unblock a Customer

If a customer is fraudulent or abusive, click **Block**. They can no longer log in. You can unblock anytime.

Blocking is permanent until you manually unblock. Blocked customers see a "Your account has been suspended" message.

CHAPTER 7

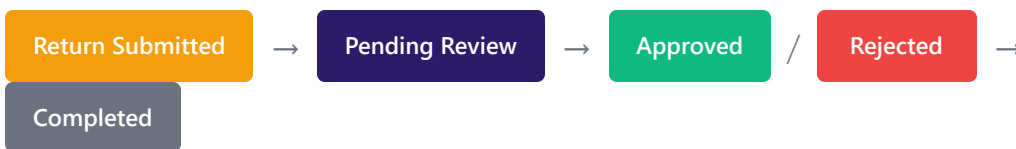

Handling Returns

Manage customer return requests efficiently

Return Request Workflow

Admin → Returns

**1**

Review the Return Request

Go to **Returns**. Filter to **Pending** tab. Each request shows: the original order, the item, customer's reason, description, and any attached photos.

2

Approve or Reject

Use the status dropdown to select **Approved** or **Rejected**. Add an admin note to explain your decision (the customer will see this).

If approved, coordinate the pickup/return with your courier partner manually — the platform does not auto-schedule pickups.

3

Mark as Completed

Once the refund/exchange is processed, change status to **Completed**.

CHAPTER 8

Banners & Homepage Content

Control what customers see on your homepage hero slider and promotional sections

Banner Positions Explained

Hero

Full-width slider at the top of the homepage. This is the first thing customers see. Multiple hero banners auto-rotate. **Recommended size: 1440×600px**

Category

Promotional banner within the category listing page. Used for seasonal offers on specific categories. **Recommended: 1200×300px**

Popup

Modal popup shown to customers (e.g., newsletter signup, sale announcement). Use sparingly — no more than 1 active popup.

Strip

Thin horizontal banner (like the top bar). Good for shipping offers or discount codes. **Recommended: 1440×80px**

Adding a Hero Banner — Step by Step

Admin → Banners → "+ Add Banner"

1

Click "+ Add Banner"

In Admin → Banners, click the button at the top right. A form appears.

2

Fill in Banner Details

FIELD	WHAT TO ENTER
Title	Main heading on the banner. E.g., "New Festive Collection"
Subtitle	Supporting text. E.g., "Discover Premium Ethnic Wear"
Link URL	Where the button takes the customer. E.g., <code>/categories/sarees</code>
Button Text	CTA button label. E.g., "Shop Now", "Explore Collection"
Position	Select hero for homepage slider
Sort Order	Controls slide order. 1 = shown first in the slider
Image	Upload the banner image (JPG/PNG, 1440×600px recommended)
Starts At / Expires At	Leave blank for a permanent banner. Set dates only for time-limited campaigns (e.g., a 3-day sale).
Active	Toggle ON to show on the website

⚠ If you set an Expires At date, the banner will automatically disappear after that date. Leave blank for permanent banners.

3

Save and Check Frontend

Click **Save Banner**. Refresh your homepage to see the new slide in the hero slider.

For best results: use 2–4 hero banners. Each slide auto-rotates every 5 seconds.

CHAPTER 9

Coupons & Discounts

Create promotional codes to drive sales and reward customers

Types of Coupons

% Percentage

Takes a % off the cart total.

Example: SAVE20 → 20% off any order
Set *Max Discount* to cap the savings (e.g., max ₹500 off)

₹ Flat Amount

Takes a fixed amount off.

Example: FLAT200 → ₹200 off orders above ₹999

Free Shipping

Removes the shipping charge.

Example: FREESHIP → No delivery charges

BOGO

Buy One Get One free.

Example: BOGO2024 → Buy any kurta, get one free

Creating a Coupon — Step by Step

Admin → Coupons → "+ Add Coupon"

1

Enter Coupon Code

The code customers will type at checkout. Use uppercase letters, no spaces. E.g., **WELCOME10**, **DIWALI25**, **FLAT500**

2

Set Type and Value

Select **Percentage**, enter Value: **10** (means 10% off). Or select **Flat**, enter Value: **200** (means ₹200 off).

3

Set Restrictions

FIELD	WHAT IT DOES
Min Order Value	Coupon only works if cart total $\geq$ this amount. E.g., ₹999 means coupon needs min ₹999 cart.
Max Discount	(For % coupons) Maximum discount given. E.g., 20% off but max ₹500.
Usage Limit	Total uses allowed across all customers. E.g., 100 = first 100 customers can use it.
First Order Only	Toggle ON to restrict to customers who haven't ordered before.
Expires At	Auto-deactivates after this date. Leave blank for no expiry.

4

Save and Share

Click Save. Share the code on WhatsApp, Instagram, or email campaigns. Customers type it in the cart page.

Welcome Coupon Best Practice

Create a coupon code

WELCOME10

(10% off, first order only, no expiry). Display it prominently in the site's top bar strip. This converts first-time visitors into buyers.

CHAPTER 10

Customer Reviews

Moderate and manage product reviews from customers

Review Moderation

Admin → Reviews

How it works:

When a customer submits a review on a product page, it goes to **Pending** status and is NOT shown on the storefront until you approve it.

1

Go to Reviews → Pending Tab

Filter to see only pending reviews. Each row shows: product name, customer, star rating, review title and body, and date submitted.

2

Read the Review

Check if the review is genuine, relevant to the product, and doesn't contain inappropriate content.

Approve even mixed reviews (3-4 stars) — a mix of positive and critical reviews builds customer trust better than only 5-star reviews.

3

Approve or Reject

Click **Approve** to publish it on the product page, or **Reject** if it's spam/inappropriate.

CHAPTER 11

Shipping Zones

Configure delivery rates and coverage areas

Creating a Shipping Zone

Admin → Shipping → "+ Add Zone"

1

Click "+ Add Zone"

You'll see a form to define a new delivery zone.

2

Fill in Zone Details

FIELD	EXAMPLE	NOTES
Zone Name	Standard India / South India / Local Chennai	Internal label
Flat Rate	₹60	Shipping charge per order
Free Shipping Above	₹999	No charge if order total ≥ this
Estimated Days	5-7	Delivery time shown to customer
Pincodes	600001, 600002, 600003	Comma-separated. Leave blank for nationwide.

3

Save and Test

Go to the storefront, add an item to cart, proceed to checkout, and enter a pincode from your zone. The correct shipping rate should appear.

Create a "Nationwide" zone with pincodes blank as a fallback for any pincode not covered by specific zones.

CHAPTER 12

Store Settings

Configure payment, store info, and system settings

Key Settings to Configure

Admin → Settings

General Settings

SETTING	WHAT TO SET
Store Name	Your brand name — "Dhakshan Fashion"
Logo	Upload your store logo (PNG with transparent background, 200×60px)
Favicon	Browser tab icon (32×32px ICO or PNG)
Currency	INR (Indian Rupee) — ₹

Payment Settings

SETTING	NOTES
Online Payment (Razorpay)	Toggle ON and enter your Razorpay Key ID and Secret from the Razorpay dashboard
Cash on Delivery (COD)	Toggle ON to allow customers to pay when the order is delivered

To accept online payments, you must have a Razorpay account. Get keys from razorpay.com → **Settings** → **API Keys**.

CHAPTER 13

Reports & Analytics

Understand your business performance with 6 built-in report types

Available Reports

Admin → Reports — all reports have date range filters and CSV export

Sales Report

Total revenue, orders placed, average order value, discounts given. Bar chart of daily revenue. Use for monthly performance reviews.

Profit Report

Revenue minus cost price = gross profit. Profit margin %. Requires *cost_price* on products. Shows most profitable products.

GST Report

Calculate GST collected by rate (5%, 12%, 18%, 28%). Shows CGST and SGST breakdown. Export for CA/accounting use.

Products Report

Units sold per product, revenue contribution, average rating. Identify your best-sellers and slow movers.

Customers Report

Orders per customer, total lifetime spend. Identify your top repeat customers for loyalty rewards.

Inventory Report

Out of stock items, low stock alerts. Use before major sale events to ensure enough stock is available.

Monthly Routine:

Run the Sales Report for the previous month on the 1st. Export GST Report quarterly for your accountant. Check Inventory Report before every sale event.

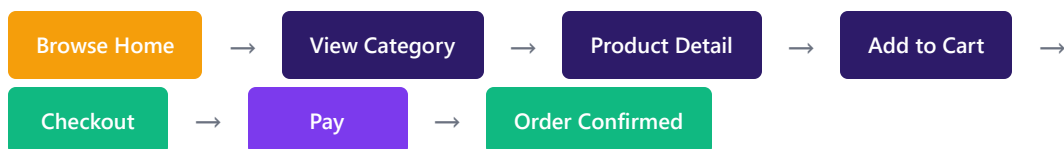

CHAPTER 14

How Customers Shop

The complete customer journey from homepage to checkout

Customer Shopping Flow

Homepage Sections

What customers see on the home page and what controls each section

SECTION	WHAT SHOWS HERE	CONTROLLED BY
Hero Slider	Full-width banner images that rotate every 5 seconds	Admin → Banners (position: hero)
Category Strip	Icon links to top-level categories	Admin → Categories (show_in_menu: ON)
Featured Collections	Products marked as "Featured"	Product → Featured flag = ON
New Arrivals	Recently added products marked "New Arrival"	Product → New Arrival flag = ON
Best Sellers	Products marked as "Bestseller"	Product → Bestseller flag = ON
Testimonials	Customer reviews carousel	Approved reviews in Admin → Reviews

Checkout Process (Customer View)

1

Add to Cart

Customer selects size/color variant and clicks "Add to Cart". Cart icon shows count badge.

2

Apply Coupon (Optional)

In the cart page, customer enters a discount code. If valid, discount is applied to the order total.

3

Select Delivery Address

Customer picks a saved address or adds a new one. Shipping rate is calculated based on pincode.

4

Choose Payment Method

Online (Razorpay): Opens a popup for UPI, card, net banking, wallets. **COD:** Pay when delivered.

5

Order Confirmed

Customer sees order success page with order number. Order appears in Admin → Orders as "Pending".

CHAPTER 15

Customer Account & Orders

How customers manage their account, track orders, and request returns

Customer Account Features

My Orders

View all past and current orders. Track shipment status. Download invoice. Cancel order (before it's shipped).

My Profile

Update name, email, phone. Change password. Upload profile photo/avatar.

My Addresses

Save multiple delivery addresses. Set a default address. Add, edit, or delete addresses.

Wishlist

Save products for later. Move wishlist items to cart. Share wishlist with friends.

Returns

Request a return for delivered orders. Upload photos of the item. Track return status.

Reviews

Rate and review purchased products. Upload photos with review. Reviews appear after admin approval.

Pincode Checker

Customers verify delivery availability before ordering

On every product page, there's a pincode checker. The customer enters their pincode and sees:

- ✓ Whether delivery is available to their area
- ✓ Estimated delivery time (e.g., "5-7 business days")
- ✓ Shipping charge for their zone

This is powered by your Shipping Zones configuration (Admin → Shipping). Make sure at least one shipping zone is active and set to cover all pincodes.

QUICK REFERENCE

Cheat Sheet & Common Tasks

The most common admin tasks with page locations

DAILY TASKS

Check new orders	Admin → Orders → New Orders tab
Update stock after delivery	Admin → Inventory
Approve pending reviews	Admin → Reviews → Pending
Process return requests	Admin → Returns → Pending
Check low stock alerts	Admin → Dashboard

WEEKLY TASKS

Add new products	Admin → Products → + Add
Update banner for campaigns	Admin → Banners
Review sales performance	Admin → Reports → Sales
Check customer enquiries	Admin → Customers

CATALOG SETUP ORDER

1. Create Level 1 categories	Admin → Categories
2. Create Level 2 children	Parent = Level 1
3. Create Level 3 sub-children	Parent = Level 2
4. Add products to correct category	Admin → Products
5. Upload product images	Product edit page
6. Set featured / new arrival flags	Product edit page
7. Add hero banner	Admin → Banners

COMMON TROUBLESHOOTING

Banner not showing	Check Active toggle + Expiry date
Category not in nav	Check Show in Menu = ON
Product not visible	Check Status = Active
Out of stock not updating	Admin → Inventory → Edit stock
Coupon not working	Check expiry date + min order
Payment not going through	Check Razorpay keys in Settings

New Store Launch Checklist

Complete these steps before going live

Catalog

- ✓ At least 3 parent categories created
- ✓ Child categories created under each parent
- ✓ Minimum 10 products added with images
- ✓ All products marked Active
- ✓ Featured and New Arrival flags set on key products
- ✓ Stock levels entered for all variants

Marketing

- ✓ At least 2 hero banners uploaded with good images
- ✓ WELCOME10 coupon created (first order, 10% off)
- ✓ Free shipping threshold set in a Shipping Zone

Configuration

- ✓ Store logo uploaded in Settings
- ✓ Razorpay keys added (for online payment)
- ✓ COD enabled or disabled as per preference
- ✓ At least one Shipping Zone configured
- ✓ Contact email set in Settings
